EDUCATION

Indian Institute of Information Technology, Kalyani

2023 – 2027

B.Tech - Electronics and Communication Engineering - CGPA: 9.43

Kalyani, West Bengal

– **Relevant Coursework:** Data Structures and Algorithms, Machine Learning, C Programming, Computer Networks

PROJECTS

AI-Powered Personal Finance Platform | Next.js, React, MongoDB, Tailwind CSS, Clerk, Inngest, Google Gemini API

GitHub: github.com/akjinit/Ai-Finance

2026

- Developed a production-ready personal finance management platform with secure authentication, multi-account support, and real-time transaction tracking using Next.js App Router, React, and MongoDB.
- Architected RESTful backend services and database models for accounts and transactions, supporting transaction filtering, sorting, bulk deletion, and atomic balance updates with data consistency.
- Implemented event-driven background workflows using Inngest for recurring transactions, monthly financial report generation, and automated budget alert email notifications through scheduled jobs.
- Integrated AI-powered financial analysis using the Google Gemini API for receipt scanning, automated expense categorization, and natural-language spending insights generation.
- Improved application security and reliability by adding rate limiting, bot protection, and request validation using Arcjet, and deployed the application on Vercel with secure environment-based configuration.

Ride Sharing Platform with AI-Based Location Recommendations | React, Node.js, Express, MongoDB, Socket.IO, Leaflet, Google Gemini API

Live Demo: full-stack-ridesharingapp-client.onrender.com — [GitHub](#)

2025

- Built a full-stack ride sharing platform with real-time driver discovery, trip orchestration, OTP-based ride confirmation, and interactive map visualization using React, Node.js, Express, and MongoDB.
- Designed a server-authoritative ride lifecycle state machine with atomic database updates and strict transition validation to prevent race conditions, invalid ride states, and inconsistent booking flow.
- Implemented low-latency bidirectional communication using Socket.IO for ride requests, driver assignment, live trip tracking, and status synchronization across riders and drivers.
- Integrated MongoDB geospatial indexing (2dsphere) for location-aware search and matching, and used OSRM routing with polyline rendering to compute route distance and ETA dynamically.
- Developed an AI-based destination recommendation module using the Google Gemini API to analyze user location context and suggest nearby popular places directly on the Leaflet map interface.

TECHNICAL SKILLS

Languages: C, C++, Java, JavaScript, Python, SQL

Frontend: React, React Router, Tailwind CSS, Responsive UI, Component-Based Architecture

Backend & Databases: Node.js, Express.js, MongoDB, MongoDB Atlas, Mongoose, REST APIs, JWT Authentication, Bcrypt, Geospatial Indexing

Systems & APIs: WebSockets (Socket.IO), Event-Driven Architecture, Concurrency Handling, Atomic Operations, State Machines, API Integration

Tools & Platforms: Git, GitHub, Postman, VS Code, IntelliJ IDEA, Vercel, Render, Arduino, OpenStreetMap (OSM), OSRM Routing, Leaflet, Gemini API

ACHIEVEMENTS

- Solved **800+** Data Structures & Algorithms problems on **LeetCode** and **GeeksforGeeks**.
- Achieved a **LeetCode** rating of **1847**.
- Ranked **1270** and **1466** in **LeetCode Weekly Contests 478** and **483**.
- Secured **1st position** in an intra-college coding competition (CodeCubes Club).
- Secured **4th position** in the Hardware Track of the **StatusCode Hackathon**.
